To: Calbraith, Stephen (DI SW GS&CS AM GCO ESAMS SD TS 2), Chin, Nicholas (DI SW GS&CS AM GCO ESAMS SD TS DST), McNicholas, Austin (DI SW GS&CS AM GCO ESAMS SD TS 1), Sherr, Zachary (DI SW GS&CS AM GCO ESAMS SD)

Hi Team,

Below is an email from Anthony Chapa outlining an example use case for group user task assignment.

Best,

Anna

Follow Up: Example Use Case

User Roles:

DE - Drafting Engineer

EM - Engineering Manager

AE - Application Engineer

CSR- Customer Service Rep.

Workflow

CSR submits Customer Drawing Request

AE develops bill of material

DE drafting engineer makes print

EM approves drawings and boms (Accept/Reject, Loop back if error)

CSR send print out to customer

There is 1 EM (Eng. Manager)

There are 6 AE's (App. Eng.)

There are 5 Drafters (Dwg. Eng.)

So to avoid confusion and allow the manager to manage the department based off realtime loading, we want a bucket view where the manager can view and reassign tasks.

So the workflow will actually go

CSR >
AE Bucket/Pool >
AE is Assigned >
DE Bucket/Pool >
DE is Assigned >
EM approves >
CSR sends out

Views:

AE Pool (Manager can view all tasks at all AE's and assign out of, AE's can see and self allocate which tasks are theirs)

AE user Task View (AE User to Complete task: In Workflow Commons)

etc...other standard CRUD views...but the important ones I am concerned about is how to manage the tasks of the employees.

I just need to know or see a design pattern that can do this.

Once i see that, I know this is the software for us and I will push for using this product throughout the organization.

That works for us Anthony. We'll proceed with the demo and we will record for others to watch later.

Thank you for your quick response.

Talk soon 😊

Poly

Subject: RE: Siemens & Amphenol - Mendix Demo

Good Morning,

I am 100% good to proceed.

From my understanding, the others are already sold on a MES solution.

While Anthony Chapa, is looking 100% at Mendix to map out other business processes.

I have been working the Crash Course on Mendix as well as resources figuring out how to integrate the Workflow Commons module.

My main questions revolve around what comes out of the box with Mendix, What comes prebuilt in the MES system and what design pattern allows me to develop "Department Bucket view of all the tasks".

Everything I am seeing is tasks are assigned to individuals, not to a group bucket for managers to figure out.

Once I see a design pattern that allows managers to assign these roles, I plan to use this throughout our organization from ECNs to RFQ processing.

I'll follow up with a Use Case example for the meeting, but for all intents and purposes, I would like to continue with our meeting.

Thank you,

-Anthony

Hi Shawn and Anthony,

I hope you're doing well. It looks like you're the only confirmed attendees for today's Mendix demo. I'm happy to proceed, or we can reschedule to ensure broader participation if that would be more valuable.

Please let me know how you'd like to proceed.

Best,
Poly
